

## **Feedback – Mid Module Assignment, Blog post – Principles of Digital Forensics and Cyber Law – Michael Geiger**

I hope you are well. Thank you for your submission. I hope you have found this assignment interesting.

Please have a look at your feedback:

- i. Knowledge and understanding of the topic/ issues under consideration: good understanding was shown. The topic was understood and discussed very well. However, Article 15 of GDPR was discussed but not elaborated on in detail - 18
- ii. Criticality: More linking to questioning and critical analysis needed- 15
- iii. Use of relevant sources: good work in this section, statements are referenced where required.15
- iv. Structure and Presentation: No issues here-10
- v. Academic integrity: There are some issues with the reference list/bibliography that does not follow basic rules, like alphabetical order, use of proper citation tools, such as end note or Mendeley is recommended - 8

Your strong point: structure of the report and use of relevant material

There is a need to work some more on: referencing and sources

NOTE: All grades are subject to change until they have been agreed upon by the External Examiner and ratified by the Examination Board.

Kind regards

Your tutor

Nida

### **Detailed feedback on the Academic integrity:**

The only concern I am having with the assignment reference is the use of any referencing tool, such as EndNote or Mendeley. These tools are recommended to use in a research report. The way you have written references in your assignment is good but the bibliography needs to be updated by using these tools.
