

## **Feedback - Development Team Project: Coding Output**

The code was well written & structured; unfortunately, some of the design specs were not met (e.g. uploaded content was not encrypted) and SQLAlchemy was not used to its full potential - Merit

The code has good OO features, and testing was comprehensive but a few security holes were found; the database interface is probably the biggest hole. - Merit

The code was very readable; with copious comments. Good use of comments to highlight/ flag references. Readme was informative. - Merit
