

## Feedback Design Document – SSA

A good list of vulnerabilities - however, take care with references about old encryption algorithms (such as WPA, etc) which are no longer relevant.

You provided a good selection of diagrams with accompanying vulnerabilities.

You made a good attempt to use CVSS although I was not 100% convinced about the mathematical treatment of the values

You provided a very good, comprehensive list of mitigations - I especially liked your discussion of the limitations of IoT devices.

Overall, a good selection of references - although some older, less relevant ones were included. A generally good layout (and use of diagrams) - however a couple of typos did creep in. Nonetheless, a very good report.
